

Fieldwork Investigations: Sensory mapping

Sydney Water

Fieldwork involves observing, measuring, collecting and recording information in the real world. Learn how to use sensory mapping to map experiences of an area.

When planning fieldwork, it's important to select fieldwork investigation methods or research tools that will help you gather data to meet your aim. You don't need fancy equipment to do quality fieldwork. You can use your skills of *observation*.

Sensory mapping is an example of an observational method you can use to investigate the importance of water in our *perceptions of liveability*.

Sensory mapping uses various senses to map the sounds and feeling in the area. Sensory Mapping is about drawing your own map on a particular day and time to describe the site in words and symbols.

Mapping our experiences of an area this way allows us to show how people are affected by the environment and present it as an *alternative form of communication*. The information gathered using senses other than our sight can inform an understanding of our environment that can often be overlooked. These sensory experiences add our overall perception of the place we enjoy.

Water plays a significant role in engaging our senses. So doing sensory mapping near a waterway will help us understand the *value of water* in our urban environment.

You can support thoughts and feelings recorded in sensory mapping by using fieldwork equipment to take atmospheric readings such as wind speed, humidity, sound, or light.

Some questions to think about while doing your sensory map:

- What role does water play in the way you're feeling?
- How important are your other senses when thinking about what you like about a place?
- Are there other ways you could record or quantify what you're thinking and feeling?

Parks and open spaces near waterways improve our wellbeing. Photos: Sydney Water

WATER AND LIVEABILITY: SENSORY MAPPING

What you'll need to do sensory maps?

- Piece of paper
- Clipboard, pen or pencil
- Mood chart, decibel scale, Beaufort scale
- Camera (optional)
- Equipment to record the environment such as –
Lux meter, anemometer, decibel meter

Sensory mapping can be done in a park or open area near or connected to a waterway.

How to make a sensory map?

Find a suitable place to do your sensory mapping near a waterway. Make sure you will be safe and not in the way of any other activity.

Part 1 – Explore your feelings

1. Sit down and close your eyes. Have your paper and pencil ready. Start in the middle.
2. Focus in on your senses of touch, sound, and smell.
 - Listen... what noises do you hear and what directions did they come from?
 - Feel ... is the sun on your face? Is the wind in your hair? What other things can you feel?
 - While you are sitting here how are you feeling? Are you happy? Relaxed? Annoyed? Bored?
3. Open your eyes and look immediately at your paper.
4. Use drawings or symbols and words to represent all the details your senses pick up.

Remember – every person's sensory map is as unique as they are.

Part 2 – adding some data

1. Use some geography skills to make some more detailed observations to complete your sensory map.
2. Use instruments or charts to assign values to our measurements.
3. What can you measure?

Light – on you and water reflections

- * With a lux measurement chart
- * With a lux meter instrument

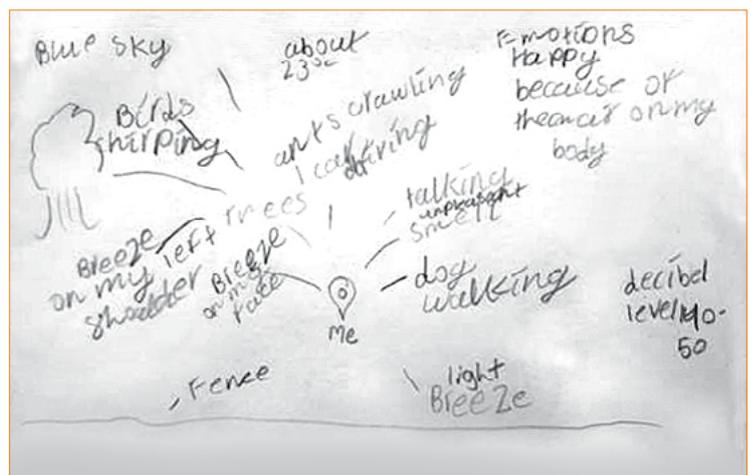

Wind – on you and the water/trees

- * With a beaufort chart
- * With an anemometer instrument

Sound – near you and focus on nature (water)

- * With a decibel chart
- * With a sound level meter instrument

4. What else can you record?
 - People's behaviour/use of space
 - Participatory observations of the area including the waterway
 - Field sketches
 - Annotated images taken with a camera

WATER AND LIVEABILITY: SENSORY MAPPING

Results

- What role does water play in the way you're feeling?
- How do our geographic observations and scientific measurement change the sensory experience?
- How does both making geographic observations and scientific measurements influence our values about the environment and perceptions of liveability?

Background information

Liveability is all those things that make a city enjoyable to live in.

Why do our senses and feelings matter?

How we value water connects us with our environment and each other. Water plays a vital role in creating a liveable city. Being near water, on the water or in the water can make many people feel relaxed, calm, and connected to the natural environment. How do you feel when you are near water?

How do we help improve liveability?

Clean water ways can make us feel better about where we live. Managing water and protecting the environment is very important to us. Sydney Water play a huge role in contributing to healthy waterways.

In Sydney we have access to clean, safe drinking water and the removal of wastewater (sanitation). That means our health and wellbeing are being cared for in the places we live.

Water and recreational space

Natural creeks and rivers add to our enjoyment of a liveable city

To further investigate the importance of water to liveability visit Sydney Water's [liveable cities](#) page.

A **Self-guided Fieldwork** Program from Sydney Water that follows could be used in Stage 4 (Liveability and Water in the world) or Stage 5 (Changing places).

Download the relevant support materials from the Sydney Water website.

Teaching and learning	Resources
<p>Lesson 1 - Introduction</p> <p>Q. What do we think about when I say “Sydney’s waterways”? ... are they natural or have they been changed by humans? Are they just the harbour and beaches?</p> <p>A . It’s also the rivers, creeks, wetlands and even stormwater drains.</p> <p>Do - Let’s find some – open google maps over Sydney, and look for the blue!</p> <ol style="list-style-type: none"> 1. Find the Parramatta River <ul style="list-style-type: none"> - Look for its tributaries - Duck Creek, Haslams Creek, Powells Creek, Whites Creek, Johnsons Creek 2. Find the airport <ul style="list-style-type: none"> - Find Cooks River to the west of the Airport - From the Cooks River find Tempe Reserve and Alexandra Canal <p>Q. Why do some of these creeks have straight sections? Look at google earth and zoom in. What do you see? (walls, wharves, bridges, roads, paths)</p> <p>A. Over time, as Sydney has grown, our uses for waterways has changed. Natural creeks were turned into canals for transport of goods and people. Some creeks were redirected around the places we wanted to build houses and industry. Some creeks have become hidden underground. All of them have become stormwater drains. A stormwater drain collects the water that falls on roads and pathways.</p> <p>Do – take a look at the catchment (all the water runs to a common point) on our stormwater catchment map to see where water flows from, into Alexandra Canal.</p> <p>Advanced – estimate the area of this catchment</p> <p>Q. So who is responsible for looking after these waterways?</p> <p>A. Sydney Water and a range of other agencies are responsible for managing the urban water cycle in Sydney, the Blue Mountains and the Illawarra.</p>	<p>Online links</p> <p>Education summary of stormwater http://www.sydneywater.com.au/SW/education/Watermanagement/Stormwater/index.htm</p> <p>Stormwater networks http://www.sydneywater.com.au/SW/water-the-environment/how-we-manage-sydney-s-water/stormwater-network/index.htm</p> <p>current stormwater project summary http://www.sydneywater.com.au/SW/water-the-environment/what-we-re-doing/current-projects/managing-stormwater/index.htm</p> <p>Stormwater catchment map http://www.sydneywater.com.au/SW/water-the-environment/how-we-manage-sydney-s-water/stormwater-catchment-map/index.htm</p> <p>Area measurement instructions for google maps https://support.google.com/mymaps/answer/3502610?co=GENIE.Platform%3DDesktop&hl=en</p> <p>Urban water management http://www.sydneywater.com.au/SW/education/Watermanagement/Urbanwatermanagement/index.htm</p>

<p>Lesson 2 – Secondary research</p> <p>Sydney Water manages a variety of projects that aim to improve the liveability of our city. Urban waterways play an important role in the cityscape. They can be modes of transport, help to reduce the impact of flooding, increase the value of property, be a source of recreation and simply make a park or open space a nice place to spend time.</p> <p>Alexandra Canal is an example of a waterway that is managed by Sydney Water.</p> <p>Using the PowerPoint presentation “Sydney Water and Alexandra Canal”, you may like to have the students either:</p> <ul style="list-style-type: none"> • Make a timeline of human interactions with Alexandra Canal waterway. • Work in groups to investigate the information provided and report back to the class. <p>The presentation includes information about the value the waterway has had over time. There are sample student questions, web links and additional information in notes section of the PPT presentation.</p>	<p>Education resources</p> <p>PowerPoint presentations</p> <ul style="list-style-type: none"> • Sydney Water and Alexandra Canal Worksheets • Class worksheet - Alexandra Canal timeline <p>Online links – many more links are available in PPT notes</p> <p>Alexandra Canal heritage information http://www.sydneywater.com.au/SW/water-the-environment/what-we-re-doing/Heritage-search/heritage-detail/index.htm?heritageid=4571712</p>
<p>Lesson 3 – Fieldwork</p> <p>This is a program you can deliver yourself at a public site linked to a Sydney Water project.</p> <p>Please see the Alexandra canal Tempe Reserve Field Worksheet teachers answers document for instructions.</p> <p>Students will investigate the aesthetic, recreational and any other observable value of Alexandra Canal near Tempe Reserve. There are a number of field techniques used.</p> <ul style="list-style-type: none"> - Aerial photograph annotation - plot where to investigate and hypothesise investigation outcomes. - Site evaluation for the landscape and waterway – looking at uses of the space by people, and animals, vegetation, litter, environmental quality (observation) and identify human modifications - Field sketch – identifying a water based view with potential appealing aesthetic value (Note – most of the text books currently published offer in text or online field sketch instructions). - Annotated photographs – identifying evidence of the different values placed on this waterway over time. - Sensory mapping – using various senses to map the sounds and feeling in the area (use an online guide before going into the field. It is a good practice to go into the playground to try this first). 	<p>Education resources</p> <p>Worksheets</p> <ul style="list-style-type: none"> • Alexandra Canal Tempe Reserve Field Worksheet students • Alexandra Canal Tempe Reserve Field Worksheet teachers answers <p>Online links</p> <p>Plant and animal ID https://www.ala.org.au/fag/species-identification/</p> <p>Sensory mapping http://sensorymaps.com/ https://makingmaps.net/tag/sensory-mapping/</p> <p>Field Sketch https://www.geogspace.edu.au/verve/resources/2.1.2.3_1_field_sketching.pdf</p>

© Sydney Water 2017 - You may view, copy, distribute, communicate and adapt this material for non-commercial educational purposes provided you retain all acknowledgements associated with the material.

<p>Lesson 4 – Reporting</p> <p>Discussion points</p> <ul style="list-style-type: none"> • Values of waterways change according to its uses. How has the value of Alexandra Canal changed over time? • Brainstorm answers from the class. Have the students put the changing values in order of the impact on Alexandra Canal. • Class discussion and sharing - Why do those values change? What do you think is the value of this waterway today? • Evaluation – how have our changing values for this waterway shown a changing attitude to sustainability? <p>Final product options</p> <ul style="list-style-type: none"> • Create a field report • Create an investigative news report • Develop a mapping app to take people on a guided walk of the waterway • Create an illustrated timeline of the waterways changes over time 	<p>Education resources</p> <p>Note - Available on Sydney Water website by Term 2 2018. For now, refer to your syllabus support documents or textbook online support.</p>
<p>Extension Lesson 5 – Future planning</p> <p>Use your field report findings to design the next stage in the rehabilitation and naturalisation of Alexandra Canal</p> <ul style="list-style-type: none"> - What's your plan? How should this waterway look to you? <p>Use the "Future plans for Alexandra Canal" worksheet and use photographs of the site to help you create a design for the future.</p> <ul style="list-style-type: none"> - How might we use this waterway in the future? How could we manage it better? - What animals would you like to see here? - Could we use it in a totally different way than anything before? - How can we recognise the past here too? <p>Present your design – depending on your resources, this may be a drawn example, or you could generate in GIS to show layering of changes over time..... Be creative... Use any format!</p> <p>Share your design with Sydney Water and have a real stormwater expert evaluate your design</p>	<p>Education resources</p> <p>Worksheets</p> <ul style="list-style-type: none"> • Class worksheet - Future plans for Alexandra Canal <p>Engage with us</p> <p>Email education@sydneywater.com.au</p> <p>Facebook Sydney Water Twitter @sydneywaternews Instagram @sydneywater Hashtag #sydneywatereducation</p>
